

You will have 120 minutes to complete the following exercise.

105 MINUTES to create and send **3 files** (HTML, CSS and JavaScript) of a progress bar that shows a process completion using 2 number inputs (quantity or progress and the goal), it will display the progress of x% out of a total of 100%. Here's an example of how it could look (add the test title and user instructions), but with a professional design that's pleasing to the customer, add an option to hide/show the progress bar and other elements that you consider necessary.

Title

Instructions

<input type="text"/>	Quantity
<input type="text"/>	Goal

Progress Bar

Here are a few examples:

- Quantity = 50, Goal = 200, Progress Bar = 25%
- Quantity = 90, Goal = 100, Progress Bar = 90%
- Quantity = 354, Goal = 590, Progress Bar = 60%

We will evaluate you on creativity, logic, functionality, validations (if incorrect data is entered, the bar won't have an unexpected behavior) and completion time. You must create it from scratch and can search on the internet. **You can't use other libraries.**

And... You'll also have **15 MINUTES** to write and send an email IN ENGLISH to your client explaining what you did in the provided time and how they could use it.

Once again, send **the email and the 3 files** to careers@midware.net with "MIDWARE TEST" and your name as subject line. For example: **JAVASCRIPT TEST - JOHN DOE**
